INSPECTION INFORMATION

CODE(S) USED TO PERFORM THIS INSPECTION (In addition to 8 AAC 78)

Refer to Alaska Statute 05.20.010-120 and 8 AAC 78 for requirements.

Inspections performed by third-party inspectors are performed by approval from the department.

CHECK ONE

☐

At the time of the inspection, no violations were identified.

No additional report is required unless additional recommendations need to be addressed.

☐

At the time of the inspection, only non certificate-blocking violations were identified.

Additional report listing recommendations must be attached to this cover sheet.

☐

At the time of the inspection, certificate-blocking violations were identified.

Additional report listing violations, required corrections, and verification necessary for clearing these violations must be attached to this cover sheet.

☐ Yes

Manufacturer's manual was referenced during this inspection. If "no", explain the reason

☐ No

in the attached report.

☐ Yes

Maintenance is appropriate and effective. If "no", specify deficient maintenance items

☐ No

in the attached report.

INSPECTOR SIGNATURE (sign and submit to the department within 15 days of inspection)

I certify that I have performed the above inspection in accordance with the requirements of Alaska Statute 05.20.010-120 and 8 AAC 78. I have reviewed state requirements, manufacturer specifications, and industry-standard practices for the safe operation of this device. I have read and understand the Recreational Inspector Briefing on the back of this form.

RECREATIONAL INSPECTOR BRIEFING

Purpose of Inspections: Inspectors have the responsibility to ensure that each device is constructed, furnished, and maintained in safe and adequate manner with facilities and equipment with which to safely and properly receive and carry all persons offered to and received by the owner or operator of the device, and to promote the safety of the patrons, employees, and the public.

INSPECTOR TYPES

Amusement Specialist

Scope: Amusement Rides

Requirement: NAARSO Level II or equivalent inspection certification.

Tramway Specialist

Scope: Tramways

Requirement: Professional certification or training certificate.

Both types of inspector perform inspections as designated by the department. The inspector shall inspect all equipment and appliances connected with devices and make reports of inspection to the department. The inspector shall, on discovering defective equipment or appliances, making the use of the equipment dangerous, immediately report this to the owner or operator of the device, and to the department.

An inspector shall file not later than 15 days after the inspection, a copy of the inspection report with the department for review. This report must come directly from the inspector and not from an agent or other company representative. Only the inspector is authorized by the State of Alaska to perform inspections and make the reports.

Inspectors are required to note any safety violations observed at the time of inspection. Inspection must be made on a device that is in functional condition and not stored, disassembled, or otherwise in a non-operable state.

Minimum Inspection Criteria Required for Amusement Rides: 8 AAC 78.030-140

Other Recommended Inspection Sources: ASTM F24; ASTM F2959-18; ANSI/PRCA 1.0-.3 2014

REPORT NOTE TYPES

Certificate-Blocking Violations have the potential to injure a person. These include inadequate safety devices, missing safety devices, exposed sharp or pointed parts that could cause injury, unguarded pinch points, excessive power and/or inadequate power controls, missing or faulty required emergency stop, and other items that could directly cause harm. This violation must include a clear remedy and indicate a method of re-inspection to clear the violation.

Non Certificate-Blocking Violations involve items that do not present a danger to any person. This category would include a lack of manufacturer documentation, lack of maintenance, lack of operational records or daily logs, and other items that in and of themselves do not present a direct safety concern.

Recommendations are not a violation of any standard practice or requirement. Maintenance is a requirement of AS 05.20.010 and so lack of proper maintenance is not a recommendation but a violation in Alaska.
